

Denis L Ashauer
President
Home Helpers

"People enjoy a higher quality of life in the home environment. Anything that allows them to safely stay there longer is a huge benefit. Walkers and lift-chairs have been around a long time but there is finally a product that focuses on the bed area.

This Friendly Bed System is very heavy duty instead of the current lightweight aids on the market. I am confident in the quality and strength of the material used in the Friendly Bed System. "

Theresa A. Froehlich
RN DON

"Mobility issues have been around for a long time and there are many assistive devices to help you to get around your home and the community. Finally someone has addressed mobility in bed. The Friendly Bed System is a sturdy, strong, and adaptable system which can assist you to move while in bed as well as assist your transfer in and out of bed independently. Now you can stay at home and remain independent with the assistance of The Friendly Bed System."

Joe Vosters, P.E.
President, Bill-Ray

Based on seeing the mobility difficulties of a stroke afflicted brother-in-law (Bill) and a 92 year old frail father (Ray) Friendly Beds was created- an integrated heavy duty system of mobility, safety and comfort components all designed to work together to allow greater independence and quality of life to those in need of assistance. In fact, the Model FB prototype was used by my father and it was the only thing that allowed him to stay at home with my 88 year old mother who had back and shoulder problems. She surely would have injured herself with turning him over, etc.- with the prototype he was 100% independent in the bed area.

**Providing critical assistance to
the Elderly & Disabled**

**Affordable solution for
keeping you safely at home**

- Improves independence & quality of life
- Free Standing over existing beds
- Reduces risk of injury to the caregiver

BILL-RAY
Home Mobility

**Made In
America**

**Help yourself vs. relying on others-
can provide strength conditioning benefits.**

Sleep in your own comfortable bed!

Structure adapts to most queen/double/twin beds-

(8" off-center for king bed- with one assist rail)

Also fits many hospital and adjustable beds

Design is modular, upgradeable and heavy duty

Allows more independence and reduces risk to caregiver/spouse

Home Care, Independent Living, and Assisted Living-
may allow staying in comfortable home surroundings
vs. the more expensive options of assisted living and
nursing home environments

To complement the versatility of the **Model FB**
(**Friendly Bed**) additional models are offered to
fit smaller beds & tighter space requirements.

Model TB (Twin Bed) offers many of the features of the
larger version but is designed to fit most twin beds
only-suitable for small rooms of assisted living facilities.

Model EB (Every Bed) offers many of the same features as
Model TB. Can be used for typical hospital bed or off-center
of a larger bed. May also be available as rental option
through local HME retailers as an economical solution
for temporary needs such as knee and hip replacements,
back surgeries etc.).

Why be forced to sleep in a narrow hospital bed?
If only mobility assistance is needed then sleep in
the type of bed you prefer!

**FREE STANDING
OVER EXISTING
BEDS**
