

EasyStand & Spinal Cord Injury

Prescribe a Home Standing Program for SCI

There are many secondary complications associated with prolonged immobility of people with a spinal cord injury (SCI). It is a common practice for SCI clinicians to include standing in their client's initial rehab program.

However, to experience the long-term medical benefits of standing, a standing frame must be prescribed for daily home use upon discharge from rehab.

By prescribing a standing frame with your client's initial equipment purchase (e.g. wheelchair, commode) they also have the best chance of obtaining funding for the standing frame through insurance.

EasyStand Glider

EasyStand & Spinal Cord Injury

Prescribe a Home Standing Program for SCI

Transferring

To transfer into the EasyStand Evolv or Glider, the individual could do an independent transfer, stand pivot transfer, or patient lift transfer. For a no-transfer option, the EasyStand StrapStand lifts the person directly from their wheelchair, bed, or other surface.

New Injuries

The EasyStand Evolv stander is available with a Shadow Tray option that provides anterior support as the person transitions to the standing position. The Evolv with Shadow Tray can help a person with a new spinal cord injury or a high level injury, to gradually adjust to the standing transition. Over 50 options are available to customize the Evolv for all levels of disability.

Active Standing

Active people with disabilities who want to take their SCI recovery to the next level will maximize the benefits of standing in the EasyStand Glider. The Glider combines weight bearing with leg movement, enhanced range of motion and arm strengthening.
